

SOFTWARE ARCHITECTURE OF AI-ENABLED SYSTEMS

Guest Lecture by Christian Kaestner

Required reading:

- Vogelsang, Andreas, and Markus Borg. "[Requirements Engineering for Machine Learning: Perspectives from Data Scientists](#)." In Proc. of the 6th International Workshop on Artificial Intelligence for Requirements Engineering (AIRE), 2019.

MACHINE LEARNING IN SOFTWARE SYSTEMS

MACHINE LEARNING

Function making predictions for inputs

$$f(x_1, x_2, x_3) \rightarrow y$$

No specification, function learned by generalizing from example data (inductive reasoning)

RUNNING EXAMPLE: TRANSCRIPTION SERVICE

THE STARTUP IDEA

PhD research on domain-specific speech recognition, that can detect technical jargon

DNN trained on public PBS interviews + transfer learning on smaller manually annotated domain-specific corpus

Research has shown amazing accuracy for talks in medicine, poverty and inequality research, and talks at Ruby programming conferences; published at top conferences

Idea: Let's commercialize the software and sell to academics and conference organizers

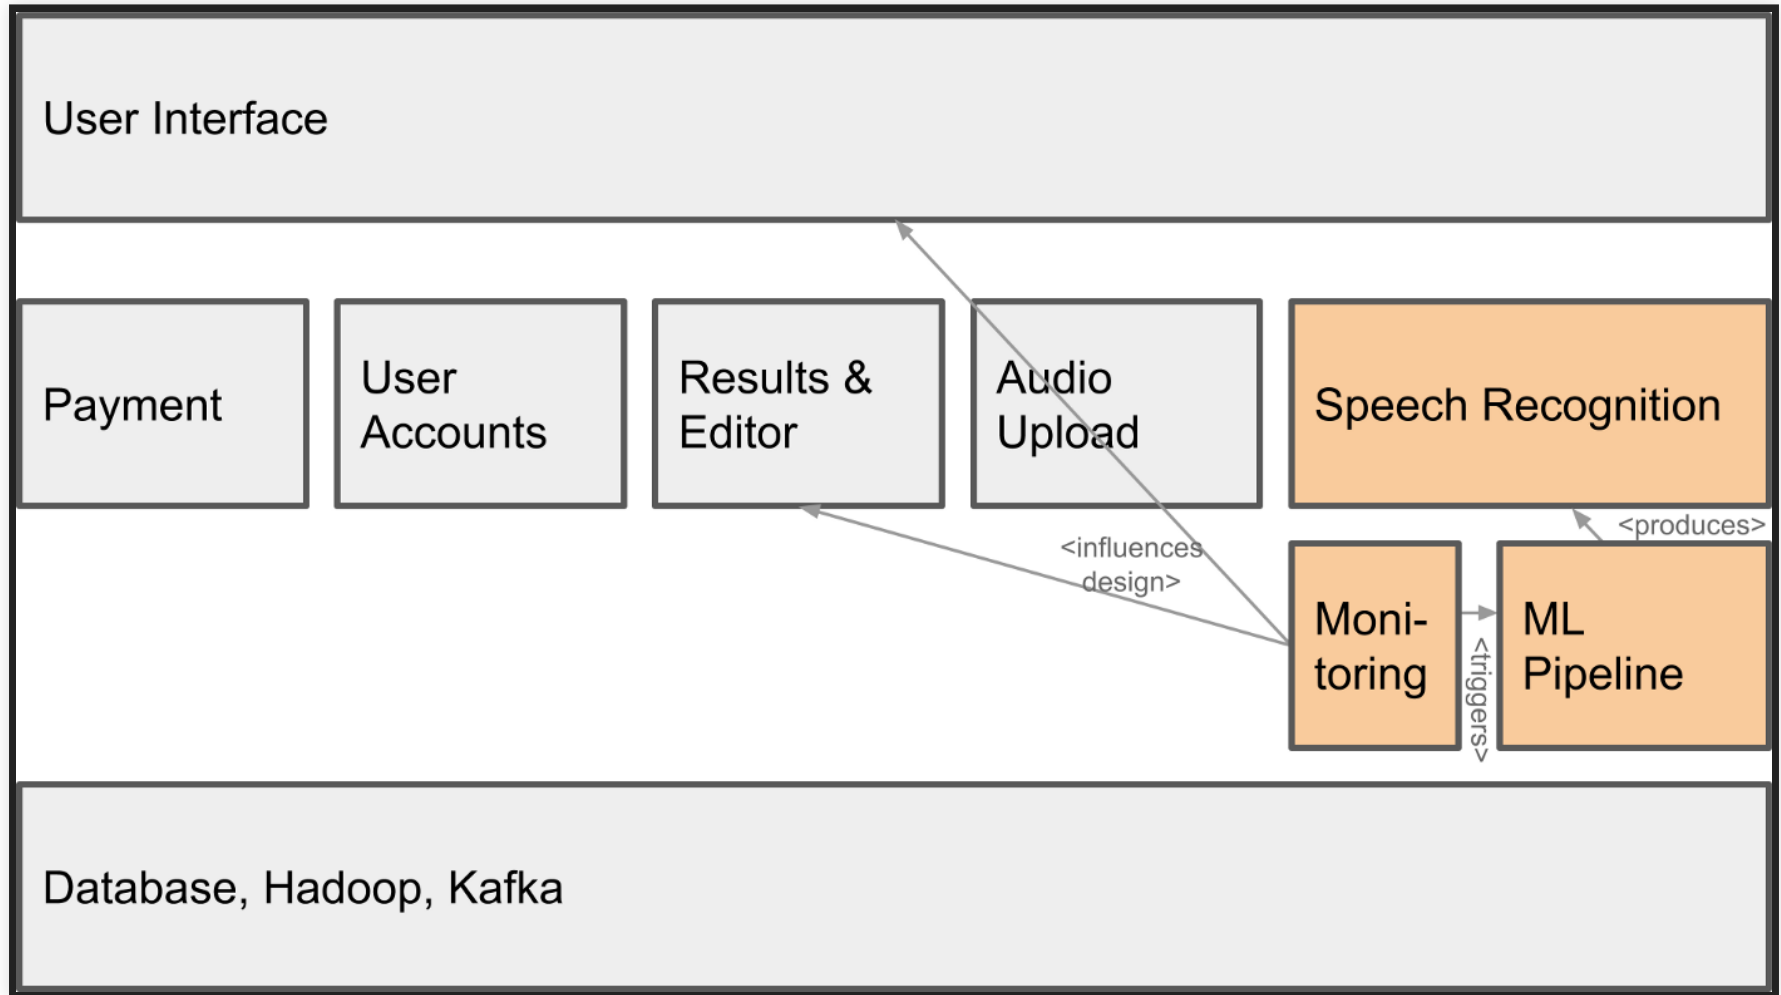

WHAT QUALITIES ARE IMPORTANT FOR A GOOD COMMERCIAL TRANSCRIPTION PRODUCT?

ML IN A PRODUCTION SYSTEM

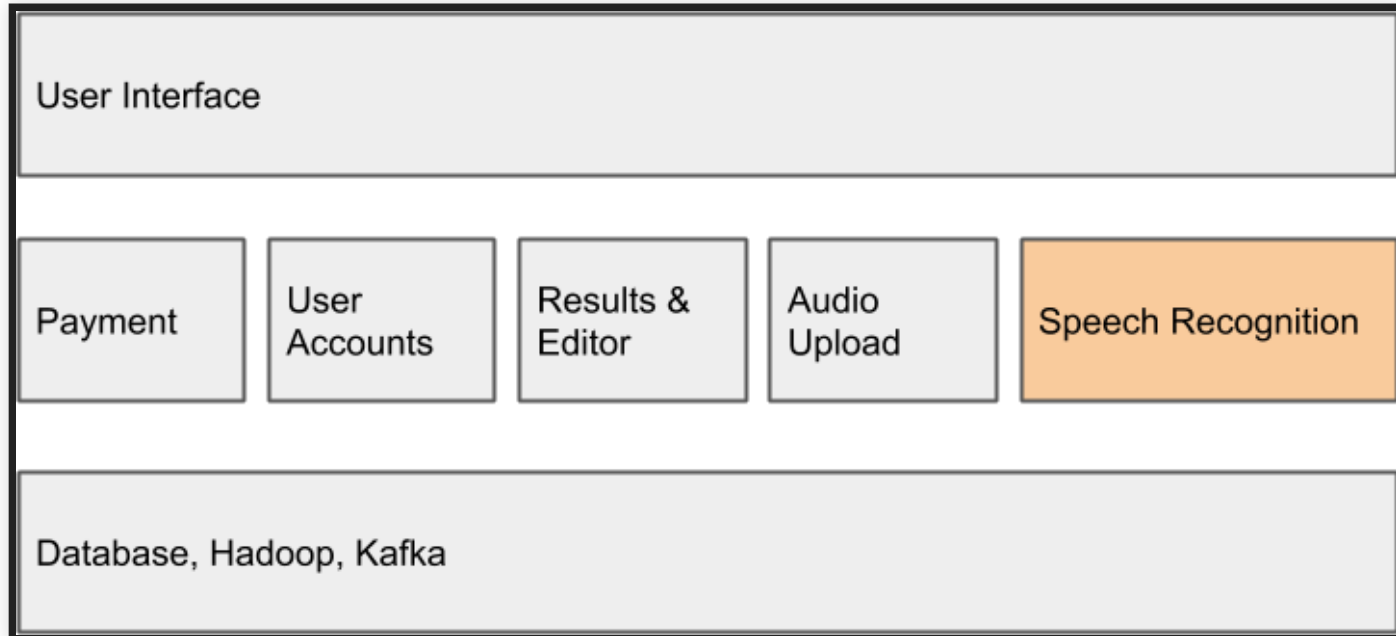

ML IN A PRODUCTION SYSTEM

ACCURACY, CORRECTNESS, AND OTHER QUALITIES

TRADITIONAL ML FOCUS: MODEL ACCURACY

- Train and evaluate model on fixed labeled data set
- Compare prediction with labels

TRADITIONAL SE FOCUS: FUNCTIONAL CORRECTNESS

Given a specification, do outputs match inputs?

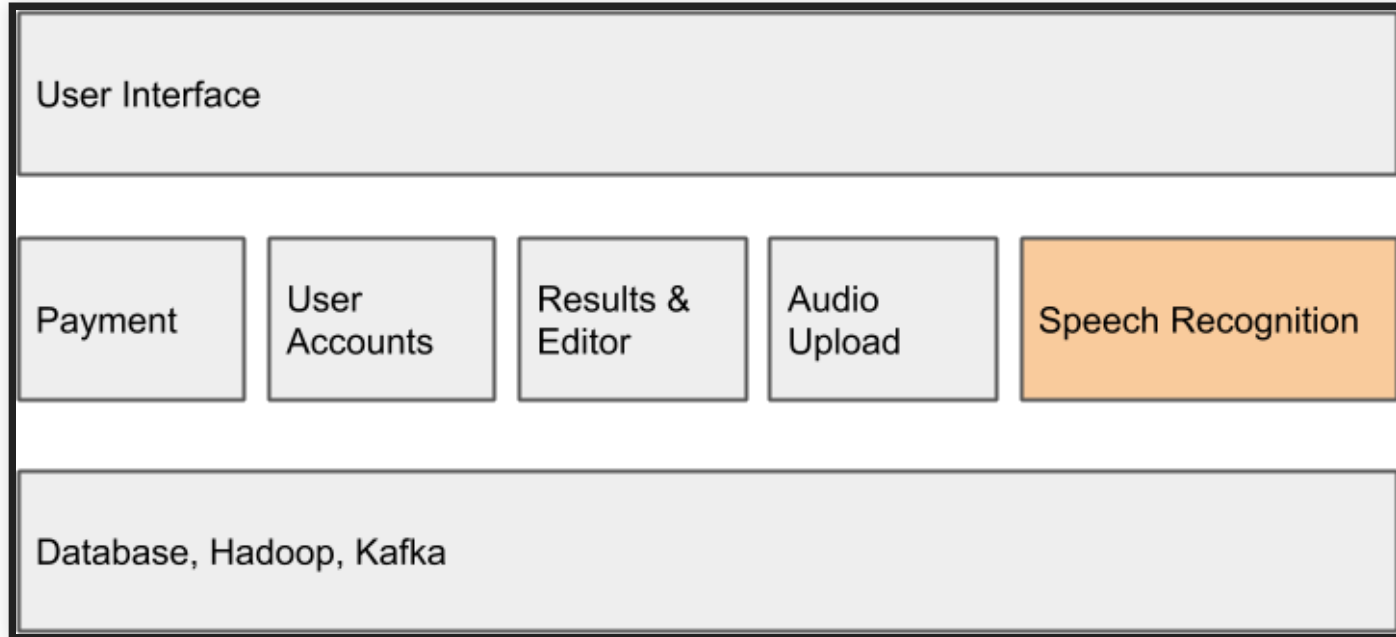

```
/**  
 * compute deductions based on provided adjusted  
 * gross income and expenses in customer data.  
 *  
 * see tax code 26 U.S. Code A.1.B, PART VI  
 */  
float computeDeductions(float agi, Expenses expenses);
```

Each mismatch is considered a bug, should to be fixed*.

(*=not every bug is economical to fix, may accept some known bugs)

NO SPECIFICATION!

We use ML precisely because we do not have a specification (too complex, rules unknown)

We are usually okay with some wrong predictions

*All models are approximations. Assumptions, whether implied or clearly stated, are never exactly true. **All models are wrong, but some models are useful.** So the question you need to ask is not "Is the model true?" (it never is) but "Is the model good enough for this particular application?"*
-- George Box

See also https://en.wikipedia.org/wiki/All_models_are_wrong

NON-ML EXAMPLE: NEWTON'S LAWS OF MOTION

2nd law: "the rate of change of momentum of a body over time is directly proportional to the force applied, and occurs in the same direction as the applied force"

$$\mathbf{F} = \frac{d\mathbf{p}}{dt}$$

"Newton's laws were verified by experiment and observation for over 200 years, and they are excellent approximations at the scales and speeds of everyday life."

Do not generalize for very small scales, very high speeds, or in very strong gravitational fields. Do not explain semiconductor, GPS errors, superconductivity, ... Those require general relativity and quantum field theory.

Further readings: https://en.wikipedia.org/wiki/Newton%27s_laws_of_motion

LIMITATIONS OF OFFLINE MODEL EVALUATION

- Training and test data drawn from the same population
 - **i.i.d.: independent and identically distributed**
- Is the population representative of production data?
- If not or only partially or not anymore: Does the model generalize beyond training data?

TESTING IN PRODUCTION

[Tweet](#)

QUALITY CONCERNS FOR ML-ENABLED SYSTEMS

- Learning time, cost and scalability
- Update cost, incremental learning
- Inference cost
- Size of models learned
- Amount of training data needed
- Fairness
- Robustness
- Safety, security, privacy
- Explainability, reproducibility
- Time to market
- Overall operating cost (cost per prediction)

DEPLOYING ML MODELS

ACCESSIBILITY: LIVE SUBTITLES

WHERE TO DEPLOY THE TRANSCRIPTION MODEL?

WHERE TO DEPLOY THE TRANSCRIPTION MODEL?

Which qualities and tradeoffs to consider?

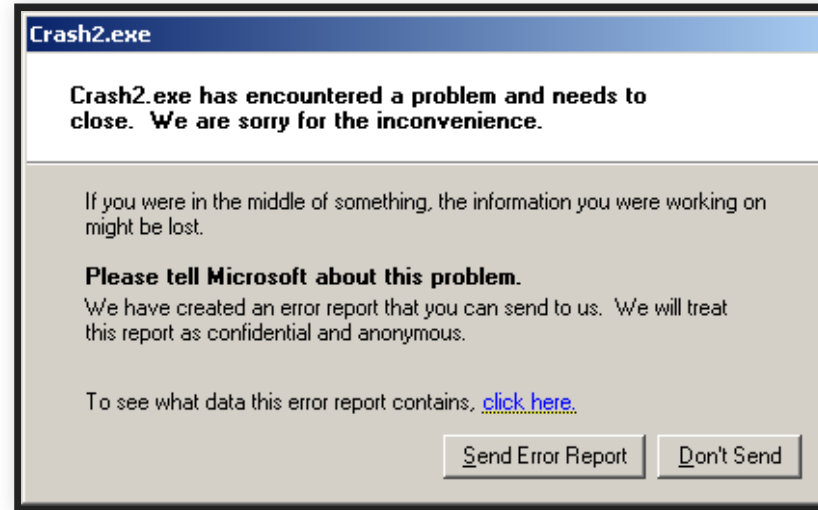

WHERE TO DEPLOY THE TRANSCRIPTION MODEL?

- Amount of data, bandwidth, bandwidth cost
- Latency
- Energy/battery cost
- Available memory, CPU capacity
- Ability to debug
- Offline functioning
- Privacy, security
- Accuracy
- Frequency of model updates

TELEMETRY DESIGN

GOALS 1: EVALUATE MODEL AND SYSTEM QUALITY IN PRODUCTION

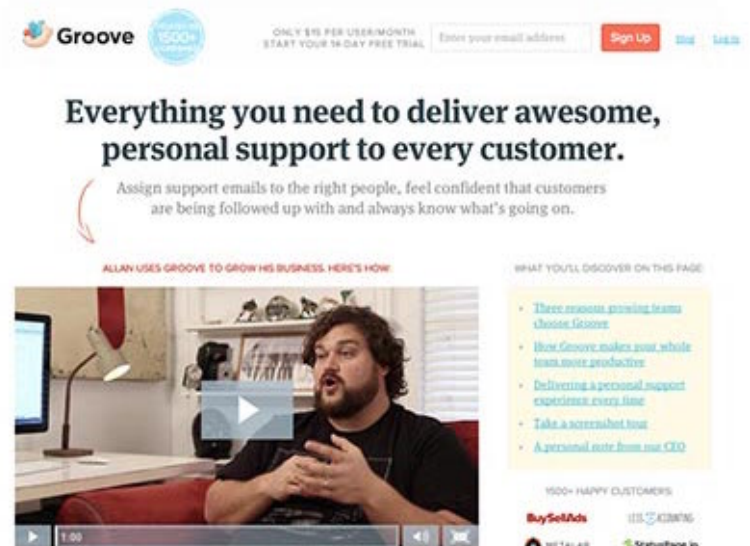

GOAL 2: EXPERIMENTING IN PRODUCTION

Original: 2.3%

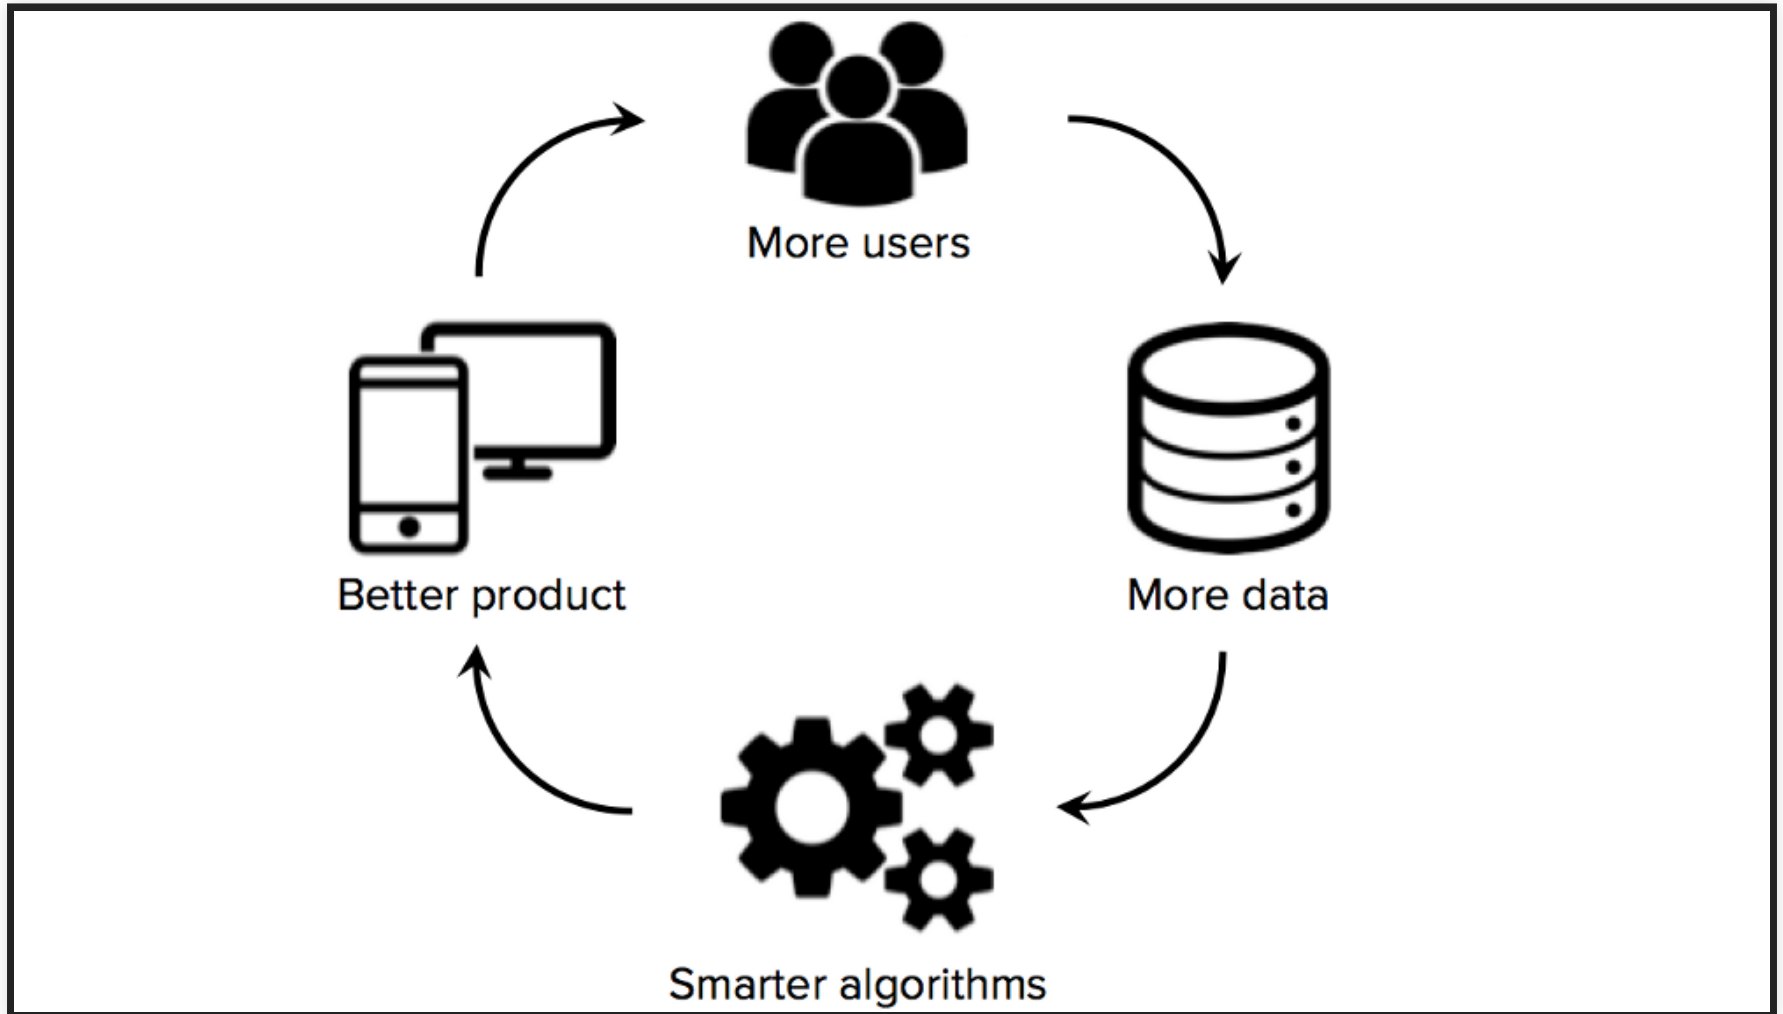

The original landing page for Groove features a large hero image of a smiling man in a plaid shirt. The headline reads "SaaS & eCommerce Customer Support." Below it is a quote: "Managing customer support requests in Groove is so easy. Way better than trying to use Gmail or a more complicated help desk." attributed to "Griffin, Customer Champion at Allocate". A green "Learn More" button is positioned to the right. The top navigation bar includes the Groove logo, "Product", "Blog", "Login", and "Try it Free for 14 Days". At the bottom, a navigation bar lists "How it works", "What you get", "What it costs", and "How we're different". A footer line states "You'll be up and running in less than a minute."

Long Form: 4.3%

The long form landing page for Groove features a hero section with the headline "Everything you need to deliver awesome, personal support to every customer." and a sub-headline "Assign support emails to the right people, feel confident that customers are being followed up with and always know what's going on." Below this is a video player titled "ALLAN USES GROOVE TO GROW HIS BUSINESS. HERE'S HOW:" showing a man speaking. To the right of the video is a list of bullet points: "Three success stories from teams who chose Groove", "How Groove makes your whole team more productive", "Delivering a personal support experience every time", "Take a screenshot tour", and "A personal note from our CEO". The bottom of the page features a "1500+ HAPPY CUSTOMERS" section with logos for BuySellAds, 1111, ADAM'S, METALAB, and StatusPage.io. The top navigation bar includes the Groove logo, a "1500+ Customers" badge, a pricing section "ONLY \$10 PER USER/MONTH START YOUR 14-DAY FREE TRIAL", an email sign-up form, and "Sign Up" and "Log In" buttons.

GOAL 3: GATHER MORE TRAINING DATA

**DISCUSSION: WAS THE TRANSCRIPTION ANY
GOOD?**

- Gather feedback without being intrusive (i.e., labeling outcomes), without harming user experience
- What data can we collect to evaluate our transcription service?
 - Evaluate business goals
 - Evaluate system quality
 - Evaluate model quality

TYPICAL TELEMETRY STRATEGIES

- Wait and see
- Ask users
- Manual/crowd-source labeling, shadow execution
- Allow users to complain
- Observe user reaction

Speaker 5 ▶ 07:44

Yeah. So there's a slight story behind that. So back when I was in, uh, Undergrad, I wrote a program for myself to measure a, the amount of time I did data entry from my father's business and I was on windows at the time and there wasn't a function called time dot [inaudible] time, uh, which I needed to parse dates to get back to time, top of representation, uh, I figured out a way to do it and I gave it to what's called the python cookbook because it just seemed like something other people could use. So it was just trying to be helpful. Uh, subsequently I had to figure out how to make it work because I didn't really have to. Basically, it bothered me that you had to input all the locale information and I figured out how to do it over the subsequent months. And actually as a graduation gift from my Undergrad, the week following, I solved it and wrote it all out.

Speaker 5 ▶ 08:38

And I asked, uh, Alex Martelli, the editor of the Python Cookbook, which had published my original recipe, a, how do I get this into python? I think it might help

How did we do on your transcript?

Speaker notes

Clever UI design allows users to edit transcripts. UI already highlights low-confidence words, can

Skype for Business

How was the call quality?

★★★★★
Good

Audio Issues

- ☐ Distorted speech
- ☒ Electronic feedback
- ☒ Background noise
- ☐ Muffled speech
- ☐ Echo

Video Issues

- ☐ Frozen video
- ☐ Pixelated video

Speaker 5 ▶ 07:44

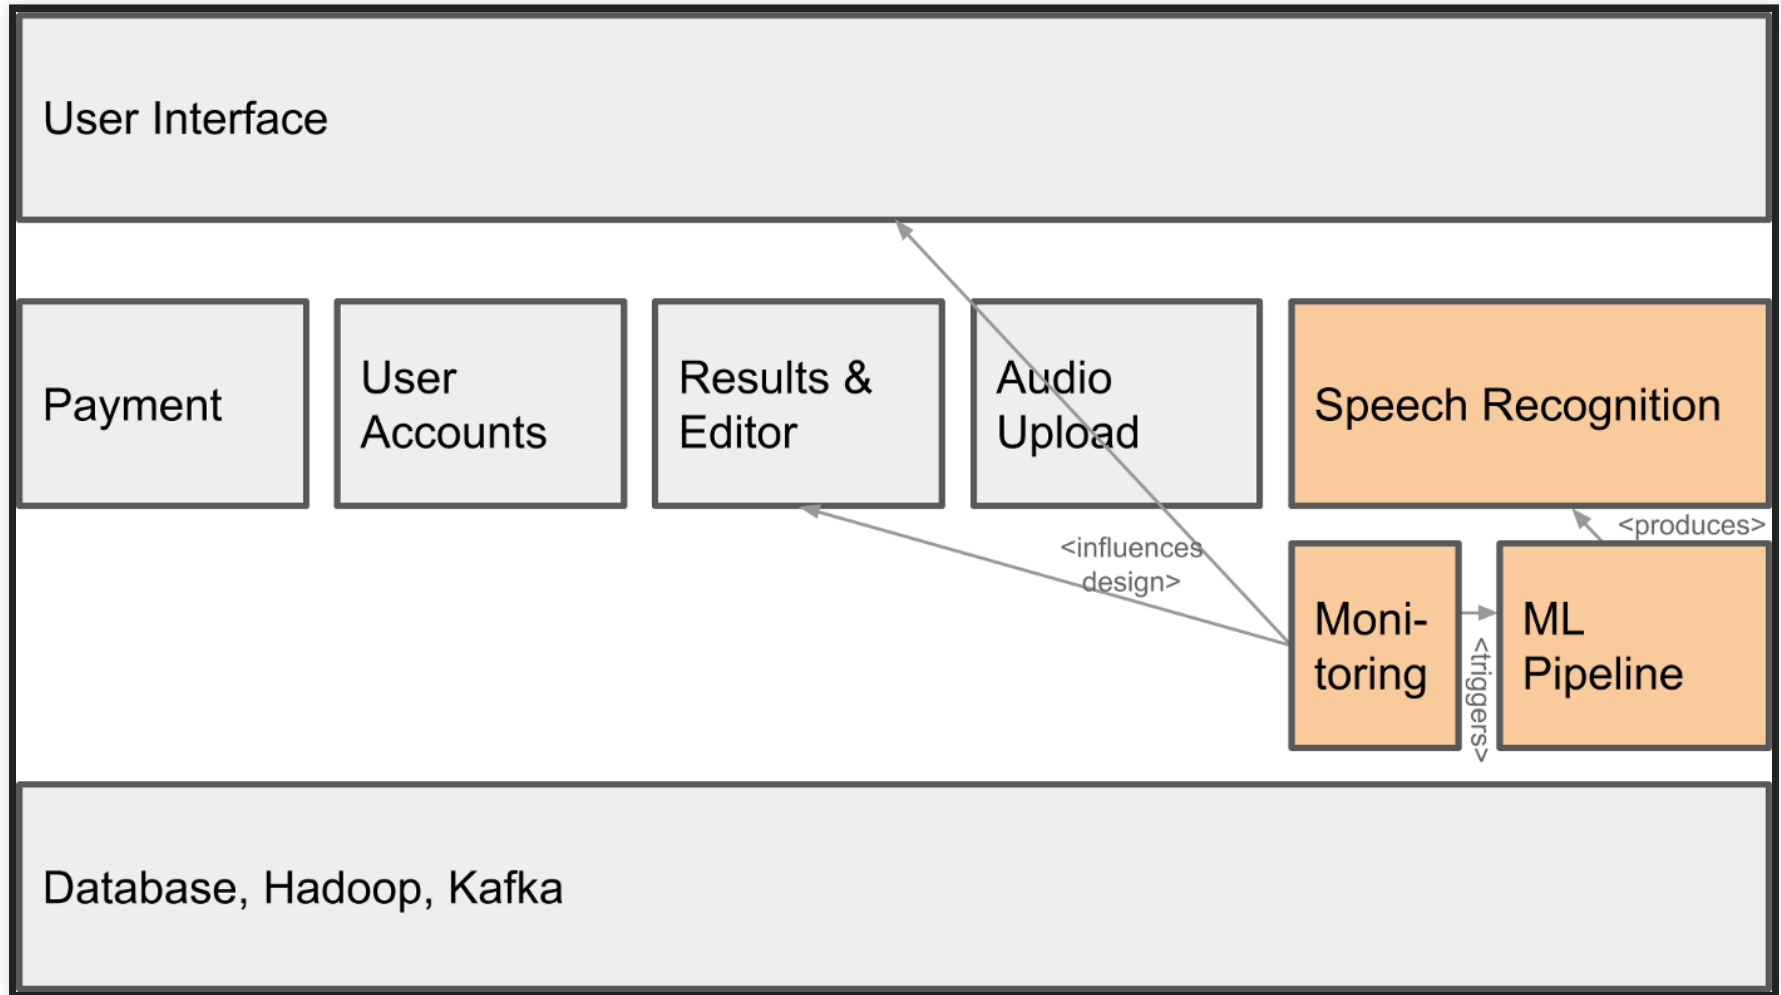

Yeah. So there's a slight story behind that. So back when I was in, **uh**, Undergrad, I wrote a program for myself to measure a, **the** amount of time I did data entry **from** my father's business and I was on windows at the time and there wasn't a function called time dot **[inaudible]** time, **uh**, which I **needed** to parse dates to get back to time, **top** of representation, **uh**, I figured out a way to do it and I gave it to what's called the python cookbook because it just seemed like something other people could use. So **it was** just trying to be helpful. **Uh**, subsequently I had to figure out how to make it work **because** I didn't really have to. Basically, it bothered me that you had to input all the **locale** information and I figured out how to do it over **the subsequent months**. And actually as a graduation gift from my Undergrad, the week following, I solved it and wrote it all out.

Speaker 5 ▶ 08:38

And I asked, **uh**, Alex Martelli, the editor of the Python Cookbook, which had published my original recipe, **a**, how do I get this into python? I think **it** might help

How did we do on your transcript? ☆☆☆☆☆

ML IN A PRODUCTION SYSTEM

DISCUSSION 2: GOOGLE TAGGING UPLOADED PHOTOS WITH FRIENDS' NAMES

- Gather feedback without being intrusive (i.e., labeling outcomes), without harming user experience
- What data can we collect to evaluate our transcription service?
 - Evaluate business goals
 - Evaluate system quality
 - Evaluate model quality

MONITORING MODEL QUALITY IN PRODUCTION

- Monitor model quality together with other quality attributes (e.g., uptime, response time, load)
- Set up automatic alerts when model quality drops
- Watch for jumps after releases
 - roll back after negative jump
- Watch for slow degradation
 - Stale models, data drift, feedback loops, adversaries
- Debug common or important problems
 - Monitor characteristics of requests
 - Mistakes uniform across populations?
 - Challenging problems -> refine training, add regression tests

Average rating last 15min

DETECTING DRIFT

Image source: Joel Thomas and Clemens Mewald. [Productionizing Machine Learning: From Deployment to Drift Detection](#). Databricks Blog, 2019

MODEL QUALITY VS SYSTEM QUALITY

Possible causes?

Bernardi et al. "150 successful machine learning models: 6 lessons learned at Booking.com." In Proc KDD, 2019.

hypothesized

- model value saturated, little more value to be expected
- segment saturation: only very few users benefit from further improvement
- overoptimization on proxy metrics not real target metrics
- uncanny valley effect from "creepy AIs"

A letter from Amazon reveals all

ENGINEERING CHALLENGES FOR TELEMETRY

- Data volume and operating cost
 - e.g., record "all AR live translations"?
 - reduce data through sampling
 - reduce data through summarization (e.g., extracted features rather than raw data; extraction client vs server side)
- Adaptive targeting
- Biased sampling
- Rare events
- Privacy
- Offline deployments?

EXERCISE: DESIGN TELEMETRY IN PRODUCTION

Discuss: Quality measure, telemetry, operationalization, cost, privacy, rare events

Google: Tagging uploaded photos with friends' names

SUMMARY

- Machine learning is a component of a larger system
- It brings new concerns, qualities, and design options
- Telemetry design is key for ML systems in production
- Many qualities and tradeoffs to consider
